

SAIKAT MUKHERJEE

B.Tech CSE (AI-ML) | Full-Stack Developer | Cloud Enthusiast

+91-7908555103 | saikatm572@gmail.com | Saikat Mukherjee | Slothyi

PROFESSIONAL SUMMARY

B.Tech CSE (AI-ML) developer who ships production-grade full-stack, Android, and ML systems. Built secure multi-factor auth platforms end-to-end and deployed on AWS. Fast learner with a problem-solving mindset, eager to drive impact on high-performing engineering teams.

EDUCATION

Techno Main Salt Lake <i>B.Tech in Computer Science and Engineering (AI-ML)</i>	Kolkata <i>Sep 2023 – Present</i>
Gobindapur Sephali Memorial Polytechnic <i>Diploma in Computer Science & Technology</i> CGPA: 8.1	Gobindapur <i>Sep 2019 – 2022</i>
Guskara Purnananda Public Institution <i>Higher Secondary (12th)</i>	Guskara <i>Apr 2018 – 2019</i>

TECHNICAL SKILLS

Languages: C, C++, Java, JavaScript, TypeScript, Python, SQL
Web: ReactJS, NextJS, NodeJS, ExpressJS, FastAPI, REST APIs, HTML5, CSS3, Tailwind CSS
Mobile: Android (Kotlin/Java), Retrofit, CameraX, ML Kit
ML/AI: TensorFlow, Keras, OpenCV, NumPy, Pandas, Scikit-learn
Cloud/DB: AWS (S3, EC2, Lambda, RDS, IAM, CloudWatch), MongoDB, MySQL
Tools: Git, GitHub Actions, VS Code, Android Studio, IntelliJ, Jupyter, Linux, Postman

PROJECTS

AttendancePRO Automated Attendance System	Kotlin, FastAPI, Python, MongoDB
- Developed a multi-factor attendance system with GPS geo-fencing (200m), BLE classroom beacon verification, and server-side facial recognition (128-dim embeddings) to eliminate proxy attendance. - Engineered an Android app with ML Kit liveness detection (blink tracking, head movement), CameraX, Retrofit API client, and real-time face capture to prevent photo spoofing. - Architected a FastAPI backend with JWT authentication, bcrypt, single-session enforcement, MongoDB persistence, and styled Excel attendance reports via openpyxl. - Designed admin features including BLE beacon advertisement, OTP session creation, real-time status dashboard, CSV import, calendar view, and manual attendance override.	
AI-Based Fake Currency Detection	Python, TensorFlow, Keras, OpenCV, CNN
- Developed a CNN-based counterfeit currency detector using TensorFlow/Keras with data augmentation and hyperparameter tuning. - Implemented image preprocessing (grayscale, resizing, normalization, noise filtering) and deployed a real-time interface via Flask/Streamlit.	
Number Shifting Game (15-Puzzle)	C, Data Structures, Algorithms
Built a classic 15-puzzle game in C with arrow-key navigation, random matrix generation, and win/loss detection logic.	

CERTIFICATIONS

AWS Certified Solutions Architect – Associate | Full-Stack Web Development Bootcamp | C++, DSA & IoT Bootcamp
